

# Education Gives China an Edge Over Russia, LSE Says

By [Jonathan Earle](#)

September 26, 2012

U.S.-born sociologist Calhoun became director of the London School of Economics earlier this month.

China and Russia are natural business partners, but China has a head start in developing its economy after investing more in education over the past two decades than Russia, said the new director of the London School of Economics.

"China made early and major investments in education. Russia was extremely slow to recognize how investments in education could pay off for diversifying the economy as well as simply advancing its citizens," the LSE director, Craig Calhoun, said in an interview.

"Recently, the government has caught up on that to some extent, but it's now way behind," he said, noting that Russian universities rank poorly in international ratings.

Speaking on the sidelines of a reception at the residence of British Ambassador Tim Barrow on Tuesday evening, Calhoun said the Soviet Union's strong education system was largely lost

in the general institutional collapse in post-Soviet Russia.

But there is reason to be hopeful that education will again become an engine of growth.

"If Russia invests in education, it has a lot to build on. Like China, Russia has a traditional respect for education. Not recently, but in the past," Calhoun said.

Furthermore, institutions like the International College of Economics and Finance, or ICEF, a college within the Higher School of Economics in Moscow that works closely with the LSE, is preparing future leaders to follow international business practices.

Calhoun, a U.S.-born sociologist and author of "Neither Gods Nor Emperors: Students and the Struggle for Democracy in China," was in Moscow attending the reception and the graduation ceremony for 122 ICEF students that preceded it.

Graduates of the program, founded in 1997, are committed to international business practices, a fact that could turn the tide of rampant corruption in Russia, said Calhoun, who became director of the LSE earlier this month.

"It will be hard for [graduates]," he said. "They will be tempted to take bribes. I think that they have very strong values. I'm impressed by their values, their determination to set new standards. But they will have to work hard at it."

Returning to China, he said that even though the country was much poorer than Russia in 1992, it had a head start in some regards, including a government that had a wider sense of legitimacy and a more decentralized economy.

"China pursued an economic opening that created a variety of opportunities," he said. "The government managed the process by managing credit, not by directly intervening in all manners of operations."

Calhoun described China and Russia as "natural partners" whose cooperation has been hampered by politics.

"Russia has energy resources, rare earths, minerals. It's going to have more with the receding Arctic," he said. "China needs all of those. The suspicions from the past are real. The desire of each to dominate makes it very difficult for them to cooperate as equals."
