

Crew Heads to Space Station

October 22, 2012

The  Moscow Times

A Russian spacecraft blasted off into a clear Central Asian sky Tuesday, carrying a three-man crew on their way to the International Space Station.

The Soyuz TMA-06M lifted off from the rolling steppes of Kazakhstan as scheduled Tuesday afternoon to deliver NASA astronaut Kevin Ford and Russians Oleg Novitsky and Yevgeny Tarelkin to the orbiting station.

Of the three who blasted off on Tuesday, only Ford has flown in space before. He spent two weeks in space as pilot of the space shuttle Discovery in 2009 on a mission to transport scientific equipment to the station.
