

## Chart: What to Expect in the Telecommunications Industry Next Year

By Rachel Nielsen

December 11, 2012

Mobile services are developing at a fast clip, more Russians are using the Internet and online retailers are carving up the market — all trends this year that point to more frantic growth for the telecommunications sector in 2013.

This year has also seen scandals involving executives at state technology and telecommunications firms, suggesting that removing corruption from some parts of the industry will be an uphill battle, while management changes and restructuring are inevitable.

WHAT'S AHEAD IN 2013

The percentage of Russians going online daily has risen to Industry experts about 40 percent from Vkontakte, predict continuing 30 percent in fall 2011, Odnoklassniki, double-digit growth, Internet use state pollster VTsIOM with 80 million users LiveJournal, online said. Russia also has by 2014 and 90 retail, news sites Europe's highest million by 2015. number of Internet users, at 59 million. Retail has been the highest-earning segment of the In 2013, online sales Russian-language will total 480 billion Internet, according to rubles, Data Insight an HSE-RAEK report. Molotok, eBay, said. As regular mail Online retail Clothes and KupiVIP.ru, Ozon.ru, service improves, the electronics are top Wikimart.ru, Yandex shipping of online sellers. This year will purchases could see 390 billion rubles become simpler. (\$12.7 billion) in sales, Data Insight estimated.
