

EU to Set Limit on Russian Gas Volumes for Germany's Opal in Early 2014

BRUSSELS — European Union regulators expect to make a decision early next year on how much Russian gas can flow from Gazprom's Nord Stream pipeline through Germany's Opal link, EU officials said Friday.

The Russian gas export monopoly's access to the 470-kilometer Opal pipeline, from Germany to the Czech Republic, is limited because of the EU's Third Energy Package legislation, which aims to prevent firms that already dominate supply from dominating transport networks as well.

Gazprom has been pressuring the EU to lift restrictions on its use of the Opal pipeline, which is crucial for increasing Russian supplies from Nord Stream directly to Central Europe.

Nord Stream, which links Russia to Germany via the Baltic Sea, is designed to bypass countries including Ukraine in the shipment of Russian gas to Europe.

EU officials say Russia already has been allowed to use 50 percent of the Opal pipeline under an existing exemption, with the proviso that the rest of its capacity should be used for the Czech market.

The overall capacity of the Nord Stream pipeline is 55 billion cubic meters a year, but Gazprom, which heads the consortium of shareholders, has been pumping only about half that.

According to Nord Stream data, it shipped 21.3 bcm in January to November, almost double the year-earlier volumes.

"Russia has accepted that Opal is on EU territory. That is why EU legislation is the crucial thing. They have asked formally for an exemption," Marlene Holzner, a spokeswoman for the European Commission, told reporters.

Gazprom is not happy with the limit and is seeking more capacity, EU officials said.

In November, the Commission, the EU executive, began reviewing the previous exemption. Under EU law, it has an initial two months to make a decision, although, under some circumstances, a further two months can be granted.

The Commission says Nord Stream is of a different status from the giant South Stream pipeline project to ship up to 63 bcm a year of gas via the Black Sea, which EU officials have said has a great deal of work to do to conform with EU law.

Holzner said the Commission would like Russia "to formally ask for an exemption" for South Stream.

Russia's deputy energy minister, Anatoly Yanovsky, said Russia had received a letter from the Commission regarding South Stream's legal status.

"We obviously would enter into a dialogue with our partners, strictly adhering to the norms of the international law," he said, without elaborating.
