

When the Cure is Worse Than the Disease

By [Michele A. Berdy](#)

November 20, 2015

There you are in the office, sniffing, sneezing, blowing your nose and coughing. Your nose is red, your eyes are dripping and you can barely talk. Your coworkers stay as far away from you as possible. Finally, after another round of explosive sneezing and coughing that efficiently disperses about a billion germs around the room, someone finally says: *Может быть, вам домой? Кашель лечить надо!* (Maybe you should go home? You really ought to get that cough taken care of.)

This everyday conversation in flu season seems simple enough. But a colleague's discussion about the word *лечить* made me realize that, like so much else in Russian, it's not quite as easy as it seems.

You can tell this from dictionaries. *Лечить* (to heal) has two definitions. One is to treat an illness, and the other is to cure it, or as they put it very carefully, "to take measures to stop an illness." So most of the time when you're translating — and you can imagine how crucial this is if you are a medical interpreter working with a patient in the hospital — you translate

лечить as the process of treating an illness or medical condition. For example, Его лечили нетрадиционными методами: грязями, иглоукалыванием. (He was treated with nontraditional methods — mud and acupuncture.) Sometimes with the noun лечение (treatment, therapy), it's very clear that we're not talking about a cure: Лечение оказывается безрезультатным. (The treatment has no effect.)

But sometimes, just to make life interesting, Russians use лечить to mean curing an illness: Врач лечил меня быстро и навсегда. (The doctor cured me quickly and once and for all.) Or curing a metaphorical illness: От меланхолии лечит только общение с прекрасным. (The only cure for melancholy is spending time with beauty.)

Thankfully, most of the time Russian speakers use one of the forms of the verb — a perfective form, for all you grammar lovers — that means to cure. Вылечить is probably the most common: Бабушка быстро вылечила простывшую внучку народными методами. (The girl's grandmother used folk remedies to quickly cure her cold.) Как вылечить хронический бронхит навсегда? (How do you cure chronic bronchitis once and for all?)

Another verb that means to cure is излечить: Процент излеченных героиновых наркоманов во всём мире ничтожен. (Only a miniscule percentage of heroin addicts in the world are cured.) Излечить is often used in a phrase from the Bible: Врач, излечи себя сам. (Physician, heal thyself.)

And then there's the лечить verb that I loathe: залечить. It can mean to heal something, usually a wound or trauma. Он никак не может залечить травму, полученную в футбольном матче. (He hasn't been able to heal the trauma he got playing soccer.) Or: Время залечит раны. (Time heals all wounds.)

But get this: залечить has a second meaning that is just the opposite — to kill by incompetent medical skills. It's usually clear when this is meant: Однажды доктор Шапо чуть не залечил Хармса до смерти. (Once Dr. Chapeau's treatment nearly killed Kharms.) Or: Едва не залечили! Температура до сорока подскочила! (They almost killed him with their cure! His temperature went up to 104 degrees Fahrenheit!)

Let's stand up and applaud a language that uses one word for "curing by medical skills" and "killing by lack of medical skills."

Язык, излечи себя сам! (Language, heal thyself!)
