Russia's presidential administration is to splash out 79 million rubles (\$1.2 million) on a new media monitoring service until the end of the year, the Vedomosti newspaper reported Friday.

The system named "Katyusha," was developed by Moscow-based⊠tech company M-13 over the past five years.

The program monitors more than 20,000 media⊠sources , and was developed without public⊠funds, said M-13 CEO Alexander Badikov.

"The system⊠allows real-time,

high-precision⊠monitor ing on a wide⊠range of topics, so that information and its⊠spread can be assessed, and that the user can quickly respond to⊠threats," he said.
