

Kremlin Buys New Media Monitoring System

September 16, 2016

Katyusha multiple rocket launchers are a type of rocket artillery fielded by the Soviet Army in World War II. **Wikicommons**

Russia's presidential administration is to splash out 79 million rubles (\$1.2 million) on a new media monitoring service until the media monitoring service

The system named "Katyusha," was developed by Moscow-based tech company M-13 over the past five years.

The program monitors more than 20,000 media sources, and was developed without public funds, said M-13 CEO Alexander Badikov.

[&]quot;The system⊠allows real-time,

high-precision⊠monitor ing on a wide⊠range of topics,

that information and its \blacksquare spread can be assessed, and that the user can quickly respond to \blacksquare threats,"

he said.
