

Russia Delivers S-300 Missiles to Iran

October 13, 2016

Sergei Porter / Vedomosti

Russia has completed a contract to deliver the S-300 surface-to-air missile system to Iran, the [Interfax](#) news agency reported on Thursday.

The head of the Rostec state corporation, Sergei Chemezov, said previously that Russia would deliver four divisions of the S-300 system to Iran by the end of 2016.

Iran has received four divisions of the S-300PMU2 “Favorit” air defense missile system, produced by the state firm Almaz-Antey, for approximately \$1 billion, according to reports.

The S-300 surface-to-air missile system is designed to defend a wide range of military and civilian objectives against cruise missiles, unmanned aerial vehicles (UAVs), and both strategic and tactical aircraft.
