

Russia Sends New Su-57 Warplanes for Combat-Testing in Syria

February 26, 2018

SU-57 Youtube

The Russian military has reportedly deployed new stealth fighter jets to Syria to test them in combat conditions.

Images of <u>four</u> Su-57s in Syrian airspace, <u>billed</u> as Russia's fifth-generation answer to the U.S. F-22 Raptor stealth fighter, have been <u>circulating online</u> since last week.

The Kommersant business daily <u>confirmed</u> Monday that the Su-57s had been sent to Syria last week, citing defense industry sources.

Last week, the RBC business portal <u>cited</u> a Defense Ministry source as saying that the Su-57s were being sent to Syria to "undergo real-world testing."

Apart from weapons systems testing, they would "clearly demonstrate the capabilities of the

military-industrial complex and paint the activities of the Russian military in Syria in a favorable light," Kommersant wrote.

A Su-57 prototype flew for the first time in 2010, while deliveries of the first batch of 12 aircraft to the Russian military are expected to begin in 2019.
