

# Russian Cosmonaut Captures Satellite Passing Space Station

June 21, 2018

Shamil Zhumatov / Reuters

Russian cosmonaut Oleg Artemyev [caught](#) video of a satellite flying by the International Space Station (ISS).

Artemyev's 25-second clip, [posted](#) on his social media [channels](#) Wednesday, shows the box-shaped satellite floating against the backdrop of Earth's blue atmosphere.

Artemyev is part of a rotating three-person crew of Russian, American and other astronauts who orbit around Earth and perform scientific research aboard the space station. His mission in March was the first ISS-bound launch of 2018.

The captivating image came only days after a jellyfish-shaped exhaust trail left by a rocket

from a Russian military space launch sparked conspiracies about a UFO sighting.
