According to procurement data, investigative offices in Siberia and the Far East signed deals last month to buy two Chinese-made Forensic Magicube portable cell phone scanners, BBC Russia [reported](#) Monday.

The Magicube is reportedly able to access Telegram, Skype and Viber message history; acquire Facebook and Twitter data; and break into Apple and Android devices.

Expert Express, the Investigative Committee's provider, boasted of the device's ability to crack an iPhone 7 or 8 in less than 10 minutes, BBC Russia reported.
