

Russia Tests Iskander Ballistic Missile System Amid INF Treaty Spat

December 06, 2018

mil.ru

Russia's military has conducted a test launch of the modern Iskander-M ballistic missile system in the south of the country, amid a diplomatic spat with Western countries over the Intermediate-Range Nuclear Forces (INF) treaty.

The 1987 INF treaty, considered a major Cold War arms control accomplishment, bars the development of missiles with a range of more than 500 kilometers. On Tuesday, the United States issued a 60-day ultimatum for Russia to comply with the INF treaty that it says Moscow has violated.

The state-run TASS news agency [cited](#) a military official as saying on Thursday that the Iskander missile system was tested at a range of 80 kilometers in the southern region of

Astrakhan and that the target was hit “by a pinpoint missile strike.”

Later on Thursday, TASS [cited](#) the chairman of the State Duma’s Defense Committee, Vladimir Shamanov, as saying that the United States’ sole evidence of Russia violating the INF treaty was an alleged test of an Iskander-M system at a range of over 500 kilometers. Shamanov denied that Russia had done so, TASS reported.

Last week, the Netherlands [accused](#) Russia of violating the arms control agreement by developing a new ground-based missile. NATO also accused Russia of violating the accord.

Russia has repeatedly denied violating the treaty and has warned that it would retaliate if the United States withdraws.
