World Anti-Doping Agency (WADA) inspectors have recovered doping data from a discredited Moscow laboratory, WADA said on Thursday — a condition of its controversial decision in September to restore the accreditation of Russia's anti-doping agency (RUSADA).

"This is a major breakthrough for clean sport," said WADA President Craig Reedie in a statement. "It shows we are continuing to make real progress that simply would not have happened without the 20 September executive committee decision."

RUSADA was suspended in 2015 after a WADA-commissioned report outlined evidence of systematic, state-backed doping in Russian athletics. Another report the following year documented more than 1,000 doping cases across dozens of sports, notably at the Winter Olympics that Russia hosted in Sochi in 2014.

With the data secured, albeit two weeks after an agreed deadline, WADA's executive committee will now consider recommendations on RUSADA's status from its compliance committee.

Were RUSADA to lose its accreditation again, so soon after being reinstated to howls of outrage from athletes and administrators, Russian sport would face the prospect of new sanctions.

Russia, one of the leading sporting powers, was banned from sending an official team to last year's Winter Games in Pyeongchang, and many Russians were excluded from the 2016 Rio Games. Most Russian athletes have also been excluded from international track and field competitions since 2015.

Due to a threat of Russian interference in the collection of data and concerns for the inspectors' safety, the CRC had said it would not send a report to the executive committee before the team had completed its work and was on its way home.

The executive committee will hold a teleconference and make their ruling on Jan. 22.

WADA will now examine the data for any sign of tampering, while Russian authorities must ensure that any re-analysis of samples required by WADA is completed — in an accredited laboratory — by June 30.

WADA said data from the laboratory will be crucial to building strong cases against cheats, and exonerate other athletes suspected of having participated in doping.

Russia has accepted there was extensive doping in the country, but its authorities have continued to deny that any of it was state-sponsored.
