The Tinder dating app is now required to share its user data with Russian authorities, according to Russia's Roskomsvoboda internet rights group.

Legislation that came into force in 2016 requires social media companies to store user data on servers located in Russia and provide this data to the authorities on demand. Russia last year [issued](#) an order to ban the Telegram messaging app after it refused to provide the user data as required.

Tinder is now [required](#) to provide its Russian users' private messages, audio, video and other material to authorities including the Federal Security Service (FSB), Roskomsvoboda [reported](#) Monday.

Roskomnadzor, Russia's communications regulator, [said](#) it had added Tinder to its database of compliant websites after it had "provided the needed information."

Tinder joins three other dating apps, including Russia's [biggest](#) dating app Badoo, that are required to store their Russian users' data in the country, Roskomsvoboda reported.

Tinder may be unaware that it is compelled under Russian law to share its users' data with the authorities, Roskomsvoboda [said](#), citing a 2017 example when the Threema encrypted messaging app was added to the database.

At the moment, the only tools Russia has to enforce its data rules are [fines](#) that typically only come to very small sums or blocking the offending online services, which is an option fraught with technical difficulties.

Russian authorities will gain new powers to block content in November when legislation that seeks to expand Russia's sovereignty over its segment of the web comes into force.
