

# What We Know About Russia's Deadly Nuclear Sub Fire So Far

July 03, 2019

**Sergei Malgavko / TASS**

Fourteen sailors were killed in a fire on board a Russian Defense Ministry research vessel while carrying out a survey of the sea floor off Russia's Arctic coast.

President Vladimir Putin has [dispatched](#) Defense Minister Sergei Shoigu to Severomorsk, the Russian naval base on the Barents Sea where the submarine is now located, to find out what caused the incident and report back to him.

## Here's what we know so far:

— The incident took place on Monday — nearly a day before the news was released — in Russian territorial waters in the Barents Sea, Shoigu reported to Putin.

— The 14 sailors died of smoke inhalation, Shoigu [told](#) Putin late on Tuesday. He said the crew extinguished the fire “through their decisive action.”

— On Thursday, Shoigu told Putin that the fire had erupted in the submarine's battery compartment.

— A Navy commission has been tasked with investigating the cause of the tragedy and a military branch of Russia's Investigative Committee has [opened](#) an inquiry into the deaths.

— The Defense Ministry had informed Putin of the accident on the day it occurred, Kremlin spokesman Dmitry Peskov said on Wednesday.

## The submarine

— Putin disclosed on Thursday — three days after the incident — that the submarine was nuclear-powered, prompting Shoigu to assure him that its nuclear reactor had been contained.

**Related article:** [Russia Confirms Submarine Hit by Deadly Fire Was Nuclear-Powered](#)

— An unnamed source in the security forces [told](#) the RBC news website the incident took place on the AS-31, a secretive deep-sea nuclear submarine.

— Launched in 2003, the submarine nicknamed Losharik was designed for research, rescue and special military operations, and can hold up to 25 crew members.

— It is [made](#) from a series of interconnected spheres, making it stronger than conventional submarine designs and allowing it to resist water pressure at great depths.

— Analysts [believe](#) the vessel is a key asset of GUGI, the Defense Ministry's Main Directorate of Deep-Sea Research, and not part of the Russian Navy. St. Petersburg's fontanka.ru news website and the Kommersant business daily [reported](#) that Losharik's crew members allegedly [belong](#) to a military unit that reports to GUGI.

## Casualties

— The Defense Ministry on Thursday [released](#) the names of the 14 sailors who were killed, saying that they “at the cost of their lives eliminated the source of the fire to rescue their comrades and the deep-water apparatus.”

— Of the 14 casualties, seven held the rank of captain 1st rank and two had held the Hero of Russia award, the highest military honor issued in the post-Soviet period.

— Shoigu [confirmed](#) that there were survivors, but did not specify how many. Anonymously sourced reports [suggested](#) four to five crew members survived the fire.

— An Orthodox cathedral in Murmansk, a city north of Severodvinsk, had listed 14 names in its [announcement](#) of a service “for the fallen seamen-submariners” on Wednesday evening.

## Reactions

- Putin called the incident "a great loss for the [Northern] Fleet, and indeed for the Army."
- Acting governor of St. Petersburg Alexander Beglov and Murmansk region governor Andrey Chibis [expressed](#) their [condolences](#) to the victims.
- "The Losharik incident will likely have a deep operational impact on [GUGI], given how advanced and relatively few these submarines are," a former U.S. National Security Council staffer [told](#) the Radio Free Europe/Radio Liberty news outlet.
- The United States has allegedly not received requests for assistance from the Russian government, a U.S. 6th Fleet spokesperson [told](#) the U.S. Naval Institute's USNI News website.

- Norwegian officials said they had been in touch with their Russian counterparts and were monitoring, but had not detected abnormally high levels of radiation.
- Colleagues around the world, including the U.S., will mourn the loss of 14 Russian sailors because of a "special bond between all submariners," [wrote](#) Washington Examiner columnist Tom Rogan.

## Past accidents

- This is the largest accident to take place on a Defense Ministry submarine since 2008, when a freon gas leak on the nuclear-powered submarine Nerpa killed 20 and injured 21.
- In August 2000, the Russian nuclear-powered submarine Kursk sank to the floor of the Barents Sea after two explosions in its bow, killing all 118 men aboard. That accident, soon after Putin took office, focused official attention on the state of the military and its hardware, which had been underfunded and neglected after the collapse of the Soviet Union.
