

Authorities Jammed Moscow's Mobile Internet During Opposition Protests – NGO

August 07, 2019

Sergei Kiselyov / Moskva News Agency

Russian authorities ordered mobile operators to cut access to mobile data services during last weekend's opposition protests in Moscow, marking the first documented case in Moscow's history, Russia's Internet Protection Society NGO has said.

Russia's first [documented](#) instance of authorities ordering to stifle mobile internet access took place in the country's republic of Ingushetia in October, when thousands gathered against a border deal with neighboring Chechnya. Last Saturday, 1,001 people were [detained](#) along Moscow's central Boulevard Ring during marches in support of opposition candidates rejected from running for city council.

Mobile internet access was restricted in an area of 13 square kilometers in Russia's capital between 1 p.m. and 7 p.m. on Aug. 3, the Internet Protection Society [said](#) Monday.

The NetBlocks internet monitoring group [documented](#) a "targeted internet shutdown" in central Moscow at the time, including partial disruptions at the state-controlled provider Rostelecom.

Protesters and journalists, including a Moscow Times reporter, [reported](#) having difficulties connecting to the internet along the demonstration route that day.

Signals were shut down "at the demand of law enforcement agencies," BBC Russia [cited](#) a call center letter it had obtained from one of Russia's three major mobile operators as saying.

Two providers [told](#) Russian media they were experiencing network overload on Saturday, claims that the Internet Protection Society argued were "groundless" based on official estimates of low protester turnout.

"Unfortunately, sometimes the presence of a large crowd of people in a limited space leads to an overload of existing 4G networks, which have their own limits based on the number of subscribers in one cell and the size of the data channel," a spokesperson for the MegaFon mobile phone provider told The Moscow Times.

Under Russian law, telecommunications services can be switched off on the decision of the Federal Security Service, the Interior Ministry or other law enforcement agencies.
