Britain has banned the export of submarines to Russia over what it says are advances that pose a national security risk, including the alleged ability to cut undersea cables which carry most global internet communications.

Britain and the [U.S.](#) have [warned](#) that the Russian Navy could disrupt over \$10 trillion in daily transactions by attacking the cables crossing the world's seas and oceans. Western military experts have suggested that a secret nuclear-powered submarine hit by a fatal fire in July had the ability to probe and possibly even sever undersea communications cables.

The British government's trade agency has announced "national control" measures prohibiting the export of submarines and related equipment, software and technology to Russia.

“This additional control is a consequence of Russia developing certain capabilities — including the ability to track, access and disrupt undersea communication cables,” [said](#) the International Trade Department’s export-control unit.

“These activities represent a risk to our national security and the new control is intended to mitigate this risk,” the agency said in a statement Wednesday.

Russia’s Defense Ministry has not yet commented on the latest ban. In 2015, A Defense Ministry-owned news channel had [said](#) that Russia can “both cut the special communication cables on the ocean floor and scan the signals they carry” in the event of active hostilities.
