

Russia Buys Up Foreign Plastic Waste as Its Own Plastic Goes to Landfills

August 30, 2019

Kirill Zykov / Moskva News Agency

Russia is ramping up its imports of plastic waste year after year as its lack of a national waste sorting system leaves recycling plants lacking enough raw materials, the RBC news website has reported.

Russia [generated](#) over 7.2 billion tons of household and industrial waste in 2018, almost 315,000 tons of which were imported, according to the Federal Service for Supervision of Natural Resources. Russia recycles only 12% of the 3 million tons of plastic waste it generates each year, RBC cited the Greenpeace Russia environmental group as saying.

Russia purchased \$20 million worth of plastic waste from other countries in 2018, according to customs data [analyzed](#) by RBC on Friday. This is a 32% increase from 2017.

The growth of plastic recycling facilities in Russia is limited “by the very slow progress of implementing garbage reform, including the very slow construction of waste sorting complexes,” RBC quoted Konstantin Rzayev, the chairman of the board of the Ecotechnology group, as saying. “As long as garbage reform stalls, imports can help.”

Once a national waste sorting system is implemented, Russia’s plastic recycling plants will be working at full capacity and the country won’t need to import plastic waste, RBC cited Higher School of Economics (HSE) environmental professor Boris Morgunov as saying.

“There’s already enough plastic to process in Russia,” he said.

Turkey (\$6.25 million), Belarus (\$3.1 million) and Japan (\$2.8 million) were reported to have sold the most plastic to Russia, followed by 22 other countries including the U.S.

In January–June 2019, Russia reportedly bought \$12 million in plastic waste, 41% more than in January–June 2018.

At the same time, Russia is exporting more paper waste, doubling sales from \$31.5 million in 2016 to \$61.6 million a year later.

Moscow’s plan to export its waste to surrounding regions has [riled](#) Russian citizens in recent months, while nationwide trash reforms [threaten](#) to shut down garbage collectors in nine regions. In the European Union, plastic items such as straws, forks and knives as well as cotton buds will be banned by 2021. Russia’s Leningrad region [banned](#) single-use plastics last year.
