

The U.S. Dithered Too Long on Russia's Nord Stream 2 Project

Denmark has lifted its block on the Russian pipeline, and now it's too late for sanctions to work.

Nord Stream 2, the controversial Russian natural-gas pipeline project, has received the last permission it needs to close the distance between the Leningrad Region and the Baltic coast of Germany. It's now probably too late for the U.S. to prevent Russia from finishing the project by the end of this year.

Nord Stream 2 is part of Russian President Vladimir Putin's plan to send natural gas to Europe without needing to go through Ukraine. The new pipeline will be able to carry 55 billion cubic meters of natural gas, more than half of what Russia now pumps through the Ukrainian

system, and would mean for Ukraine a loss of \$3 billion a year in gas transit revenues. The U.S. would like to prevent this, and also keep relatively cheap Russian gas from becoming an obstacle to increasing exports of U.S. liquefied natural gas to Europe. President Donald Trump has [argued](#) that Germany is too dependent on Russian gas, and has repeatedly threatened European companies involved in the project with sanctions.

Meanwhile, Russia has rushed to lay the pipe. On Oct. 1, Gazprom, the Russian gas export champion, said construction was 83% finished, with 2,042 kilometers (1,270 miles) laid across the bottom of the Baltic Sea. There had been a snag, though: For two years, Denmark put off granting permission for the section that was to pass through its territorial waters. On Wednesday, Denmark finally granted it, allowing the pipeline to take the shortest possible route, and Gazprom says that section can be built in five weeks.

This is a blow to Ukraine, albeit not a surprise. “We expected it this fall,” Andriy Kobolyev, chief executive officer of Naftogaz, the Ukrainian state company that runs the pipeline system, [posted](#) on Facebook. “Denmark’s principled position held back the project for some time, but geopolitical weapons cannot be stopped by means that regulate pure trade relations.”

It’s true that Denmark could not have held the fort forever while the U.S. dithered. The recent [spat](#) over Trump’s interest in buying Greenland did little to encourage the Danish government to keep dragging its feet.

Kobolyev called for Western sanctions as the next step. And in that, he’s supported by some American legislators. Republican Senator Ted Cruz promised to push his colleagues to pass the [bill](#) he has proposed with Democratic Senator Jeanne Shaheen, which would impose sanctions on vessels laying the pipeline.

That bill, however, is unlikely to delay the construction by much. Although Gazprom has used a Swiss-based contractor, Allseas Group SA, to lay the pipe, it [can use](#) its own vessel, the Akademik Cherskiy, for the final stretch.

So it’s too late for the U.S. to act. Sanctions against financing the pipeline could have been effective at the stage before European companies — Royal Dutch Shell, Engie, Uniper, OMV and Wintershall — provided what was needed. Sanctions against pipe-laying vehicles could have made a difference before the construction work began. In any case, they could have given Ukraine more time to renegotiate its gas-transit contract with Gazprom, which runs out at the end of this year.

A completed Nord Stream 2 will at least help Germany’s plans to stop using coal to generate power by 2038 — plans that cannot rely entirely on renewable energy, at least not until storage technology advances. ([Most of the coal](#) that will be replaced, by the way, is Russian coal.)

Now Ukraine, backed by the EU, wants a 10-year contract to pump 40–60 billion cubic meters of natural gas. But Russia insists that any long-term agreement should resolve

Ukraine's billion-dollar legal claims on Gazprom, and for now is likely to agree only to a short-term, placeholder deal. Meanwhile it will keep working on bringing both Nord Stream 2 and the Turkish Stream project, meant to supply gas to southern Europe, to full capacity.
