It added that the radiation levels did not "currently threaten the Russian population" and that

it “has increased its radiation monitoring in the adjacent border areas.”

A website run by far-right U.S. talk show radio host Hal Turner [claimed](#) Wednesday that unidentified military sources had allegedly detected an underwater nuclear explosion in the area that caused powerful shockwaves. The U.S. tech news website Gizmodo cited two scientists who [dismissed](#) the report as fake.

Gizmodo reported that uRADMonitor Global Environmental Monitoring Network data used in the initial report registered “negligible” radiation and noted that two other agencies in the region showed normal radiation readings.

Military analysts [reported](#) Saturday that an 11,000-ton Chinese nuclear missile submarine had surfaced among Vietnamese fishing boats in the South China Sea in September.
