Russia's largest lender, Sberbank, has added driverless cars to its list of technology ventures, by teaming up with artificial intelligence (AI) transport developer Cognitive Technologies, the two companies [said](#) Thursday.

Sberbank and Cognitive Technologies have signed a legally binding document to create a new company, Cognitive Pilot, they said in a statement.

Sberbank will have a 30% share in the company, while Cognitive Technologies will take 70%. The two companies did not disclose financial details of the deal, which will be completed in

December.

The move marks the latest foray into Russia's digital economy for state-owned Sberbank, which finalized the terms of a food delivery joint [venture](#) with Mail.Ru earlier this month and [agreed](#) to buy an equity stake in the internet company.

The new company will be engaged in developing “digital economy projects in transport, agriculture, computer vision and artificial intelligence,” the statement said.

Russian internet giant Yandex currently leads the way in Russia's driverless car market, testing its technology on the streets of Moscow and Israel, with a licence to begin [testing](#) in the United States from next summer.

Earlier this month, Yandex said it had begun testing autonomous delivery robots.

Cognitive Technologies founder Olga Uskova will head the new venture with Sberbank. The company builds components for driverless vehicles, as well as developing autonomous control systems for agricultural machinery, trains and trams.

Its clients include Hyundai Mobis, Russian Railways and Rusagro, a Russian agricultural firm.

This month, Sberbank said it had agreed to [transfer](#) a “golden share” it holds in Yandex to a new public interest company proposed by Yandex.
