

# Crimea's Capital Faces Water Shortage, Plans Daily Shutoffs

February 06, 2020

Crimea had received most of its water from Ukraine until 2014, when Russia annexed the peninsula.  
**Roman Balayev / TASS**

The capital of Russian-annexed Crimea is facing a water shortage with enough supply to last 100 days, the Kommersant business daily [reported](#) Wednesday, citing regional and local officials.

Crimea received 85% of its water from Ukraine's Dnieper River via the North Crimean Canal until 2014, when Russia annexed the peninsula and Ukrainian authorities blocked the canal. The three reservoirs supplying Simferopol are currently at one-third their capacity, the RBC news website [reported](#).

If the city's water consumption doesn't change, Simferopol's water supply will only last 90 to 100 days, Kommersant cited Crimean water management official Igor Vail as saying at a city

administration meeting.

Simferopol will introduce water restrictions on residents and businesses starting Feb. 10, Elena Protsenko, the head of the city administration, [wrote](#) on her Facebook page. Water will be turned on in the mornings and evenings, with hot water turned off every day except Saturday and Sunday.

“The restrictions will not affect socially significant places: hospitals, schools, kindergartens, etc.,” Kommersant quoted Andrei Chernichenko, the head of information for Simferopol’s administration, as saying.

Viktor Tarasenko, the president of the Crimean Academy of Sciences, told Kommersant that Simferopol’s water shortage stems from a second consecutive winter with low snowfall as well as a dry spring, summer and fall last year.

“Bad luck with rainfall. Unfortunately, nothing substantial has come up in the past few years in terms of searching for and implementing new alternatives,” he said.

In January, Russian President Vladimir Putin [criticized](#) Crimean officials for failing to resolve the peninsula's water shortages.
