

Black Smog Raises Siberian City's Alarms

February 20, 2020

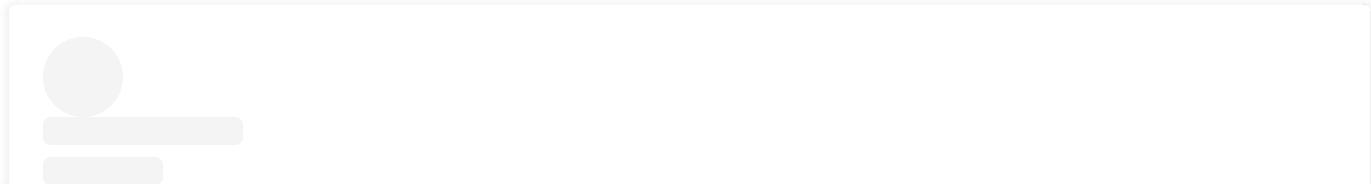

Krasnoyarsk, a city 4,100 kilometers east of Moscow, regularly appears near the top of Russia's annual air pollution rankings. **Marco Fieber / Flickr (CC BY-NC-ND 2.0)**

Smog-plagued Krasnoyarsk [declared](#) its second weather emergency in two months Friday as the Siberian city continues to reel from air pollution.

Some 4,100 kilometers east of Moscow, Krasnoyarsk regularly [appears](#) near the top of Russia's annual air pollution rankings. The city's authorities have regularly declared smog emergencies — measures that include advising residents to leave — in the past decade, with states of emergency sometimes in place for up to two months in a given year.
