Ukrainian officials accused Russia at the weekend of using phosphorus chemical bombs in the eastern Donbas region, while a separate air strike on a monastery sheltering civilians wounded 30.

International law prohibits the use of white phosphorus shells in heavily populated civilian areas but allows them in open spaces to be used as cover for troops.

Oleksii Biloshytsky, head of police in Popasna, around 100 kilometers (60 miles) west of Luhansk city, said late on Saturday that Russian forces had used the chemical weapon in his area.

"It's what the Nazis called a 'flaming onion' and that's what the Russcists [amalgamation of 'Russians' and 'fascists'] are dropping on our towns. Indescribable suffering and fires," he wrote on Facebook.

It was not immediately possible to verify the comments.

Further south, bombs struck the Sviatoguirsk monastery, where nearly 1,000 civilians were sheltering at the weekend, wounding 30 people, the Ukrainian public prosecutor said at the weekend.

And on Saturday night, a train evacuating people from the Donbas to the western city of Lviv was shelled, according to Donetsk military commander Pavlo Kirilenko.

One person was killed and another wounded, he said.

The Luhansk and Donetsk regions of eastern Ukraine, collectively known as the Donbas, were partially controlled by Moscow-backed separatists even before the full-scale Russian invasion of Ukraine on Feb. 24.

The areas attacked at the weekend lie outside the so-called separatist "republics" of Luhansk and Donetsk declared by the pro-Russian rebels before the start of the war.
