

War in Ukraine: The Knock-on Effects on the Minerals Necessary for the Green Transition

[Eurasian Climate Brief](#)

September 06, 2022

The invasion of Ukraine by Russia has not only impacted the price and availability of commodities such as oil and gas, but aluminium, nickel and rare earth elements including titanium, scandium and palladium. In this episode we discuss the issues around the production and supply of rare earth minerals with Robert Muggah, a political scientist, urbanist and security expert. Muggah is the co-founder of the Igarape Institute, a think tank dedicated to climate security that is based in Brazil.
