Heavy rains struck southern Russia's Black Sea coast over the weekend, leading to evacuations as overflowing rivers washed away cars and flooded homes.

Emergency authorities in southern Russia's Krasnodar region <u>issued</u> a flash flood warning from late Sunday into Monday due to the heavy rains.

Footage published early Sunday showed several cars piled together in a mudslide in Russia's biggest resort of Sochi.

Beachgoers witnessed dolphins being washed up by strong winds and waves.

Around 150 households were <u>flooded</u> and 54 people were placed in temporary shelters at the

Sirius urban settlement, a science, educational and tourism cluster established by President Vladimir Putin.

No deaths were reported.

The floods also caused <u>disruptions</u> in train services between Russia and the breakaway Georgian region of Abkhazia.

Local emergency authorities urged tourists and residents against visiting the flood-hit region.

On Monday, the Russian Emergency Situations Ministry's Krasnodar region branch issued another <u>warning</u> for heavy rains, thunderstorms and tornadoes throughout the day.
