

Flash Floods Cause Major Power Outage in Far East Russia

August 25, 2023

Heavy rain in Vladivostok. Anton Ivanov / TASS

Flash floods have struck Far East Russia's Primorye region for the second time this month, causing major power outages in the territory's administrative center of Vladivostok on Friday.

A total of 70,000 out of the 600,000 residents of Vladivostok were left without electricity over an eight-hour period, <u>said</u> the Primorye region's prosecutor's office.

It was reported that two weeks' worth of precipitation fell in just a few hours of rainfall.

Footage shared by Vladivostok's Newsvl.ru news website <u>showed</u> extensive flooding, as well as damaged infrastructure and residential homes. Roads, parking lots and bridges were seen overflowing with water.

A preliminary investigation was <u>launched</u> into a damaged bridge.

Embed:

The floods were <u>partly caused</u> by the soil soaking up rainwater from heavy rains earlier this month, according to Newsvl.ru.

Primorye region Governor Oleg Kozhemyako <u>asked</u> employers to cut the workday short and let workers leave early.

Prosecutors <u>said</u> kindergarteners have been evacuated from some flood-prone areas.

The Primorye region was <u>hit</u> by tropical storm Khanun earlier in August, causing a deadly dam burst and triggering evacuations.
