On November 6, a Ukrainian kamikaze drone (probably an A-22 Flying Fox) hit Russian warships in the Caspian Sea for the first time. According to Ukraine's Defence Intelligence service, at least two targets were damaged. These are likely missile patrol ships [Tatarstan and Dagestan](#) moored at the Russian naval base in the city of Kaspiysk.

Kaspiysk is about 1500 kilometers from the border with Ukraine. Ukrainian intelligence chief Kyrylo Budanov [said](#) in September that Ukrainian drones are capable of hitting enemy targets at a distance of up to 1800 km. But the events of November 6 clearly still came as a surprise to Russian security forces.

Despite the head of Dagestan's [call](#) not to post photos and videos of the incident, channels from Dagestan and across Russia are full of videos of the drone's flight and impact from

different angles.

The incident is also being hotly discussed on local social media. During the attempt to shoot down the drone, the Russian military spared no bullets, and as a result, some of them hit the [homes](#) of the Caspian people. Bloggers [complain](#) that despite the allocation of 550 million rubles (\$5,640,000) of state funds for the Safe City system, neither the Emergency Situations Ministry's warning nor the civil defense systems worked. The mayor of Kaspiysk [announced](#) after the strike that street lighting will be turned off between 1 and 8AM "to minimize the presence of people on the streets at night."

Dagestan has long been one of the most problematic regions in Russia and for the Kremlin authorities. In June 2023, the republic's Prime Minister [stated](#) that due to "the threat of actions from Ukrainian special services and nationalists, anti-terrorist security measures will be strengthened in the republic." However, this is a fairly standard attempt to explain internal problems and, accordingly, the mood of the local population, which is also [used](#) by the central Russian authorities.

**Related article:** [Kyiv Has Said What Peace for Ukraine Should Look Like. Will Allies Listen?](#)

Officially, [13%](#) of the republic's population lives below the poverty line. [Sporadic protests](#) due to a lack of water and electricity are commonplace, as are counterterrorism operations. But with the outbreak of the Russian-Ukrainian war, the security situation has deteriorated further.

As early as the spring of 2022, [more people](#) from Dagestan were killed fighting in Ukraine than from any other region of Russia. The only mass actions against that year's partial mobilization took place in [Dagestan](#). In 2023, Putin [arrived](#) in the republic for the first time in several years after local Telegram channels [organized](#) flash mobs with [anti-Russian themes](#) during Muslim holidays.

At the end of March 2024, the republic's Ministry of Internal Affairs [reported](#) that 14 Dagestanis were involved in criminal cases and put them on the wanted list for participating in the war "as part of units of the armed forces of Ukraine."

Therefore, the first case of Ukrainians hitting ships in the Caspian Sea is not just a success for Kyiv and new problems for the Russian navy, it is a direct approach of the Russian-Ukrainian war to Dagestan, which may have additional negative consequences for the Russian authorities in the region.
