

# Russia's Harvest for Buckwheat, a Kitchen Staple, Set to Hit 6-Year Low

August 19, 2025

Erik Romanenko / TASS

Russia's buckwheat harvest is on track to fall to its lowest level since 2019, the latest sign of strain in one of the country's staple crops.

Analysts at the AB-Center agricultural consultancy [estimate](#) that the 2025 harvest will decline by 35% year-on-year to 788,000 metric tons.

The sharp drop comes as farmers drastically reduce the amount of land sown with buckwheat, which fell to 733,400 hectares this year — the smallest area in 22 years.

Vladimir Petrichenko, head of the ProZerno analytical center, [said](#) that although farmers reduced planting across all grains, the decline in buckwheat was the most dramatic, with sown areas for buckwheat plunging 32% compared to just 5% for grains overall.

A ton of buckwheat currently sells for 23,000 to 24,000 rubles (\$286-\$300), while buckwheat groats fetch just 16,000 rubles (\$200).

“Buckwheat has been cheaper than third-class wheat this season. For producers, that’s close to catastrophic. At these prices, it’s simply unprofitable to grow,” Petrichenko [told](#) the trade outlet Agroinvestor.

Meanwhile, per-capita demand for buckwheat, a hearty grain long considered a staple of the Russian diet, reached a historic high of 3.47 kilograms this year, according to AB-Center.

Rising food inflation has driven households to seek out cheaper sources of carbohydrates, boosting demand.

Still, analysts see little chance of further consumption growth.

Production currently [exceeds](#) domestic demand by about 11% and exports are almost exclusively limited to China, which imported 280,000 tons of Russian buckwheat last year, the same volume as the year before.

Planting has fallen across all major producing regions, including the republic of Bashkortostan as well as the Altai, Oryol and Novosibirsk regions.

With the smaller harvest, the market is expected to draw down stockpiles of about 700,000 tons, roughly the same level as at the start of last season.

“Those reserves will shrink this year,” Petrichenko said.
