

Gasoline Prices in Russia Continue to Soar, Beating August Record

September 04, 2025

Vladimir Gerdo / TASS

Wholesale gasoline prices in Russia climbed to [record highs](#) this week, driven by a wave of Ukrainian strikes on Russian refineries that has coincided with peak demand during the holiday and harvest seasons.

According to data from the St. Petersburg International Mercantile Exchange, the country's main commodity exchange, the price of AI-95, a type of unleaded motor fuel that is standard at gas stations across Russia, reached a historic high of 82,380 rubles (\$1,000) per ton on Wednesday. Although the price dipped slightly by 1.33% on Thursday, it remained near its peak.

The price surge, which began earlier this summer, has seen wholesale costs soar by over 50% since January. Experts have largely attributed the increase to an uptick in Ukrainian attacks that have damaged refineries and forced major facilities offline, thereby tightening supplies.

In response, the government imposed a temporary ban on gasoline exports for August and

September and is now [considering](#) an extension through October.

According to the business newspaper *Kommersant*, oil companies may have [abandoned](#) their practice of holding down prices last month because they expect the government to retroactively adjust the “fuel damper” subsidy mechanism. The damper compensates producers for selling fuel cheaply at home instead of exporting it, but firms normally risk losing payouts if domestic prices rise too far.

Sources told the newspaper that officials plan to widen the permitted gap between domestic and export prices, which would allow companies to keep receiving subsidies despite the surge.

On Wednesday, Russia’s Energy Ministry reportedly [convened](#) to discuss further stabilization measures. Options said to be under consideration include requesting that oil companies divert additional volumes of diesel from export pipelines to the domestic market and encouraging traders to purchase fuel in a more consistent manner to qualify for discounts from suppliers.

Energy Minister Sergei Tsivilev [said](#) oil companies have also adjusted their refinery repair schedules to avoid periods of peak demand, an attempt to mitigate the ongoing supply crunch.
