

Russia's Farm Sector Losing 150K Workers a Year, Agriculture Minister Warns

October 08, 2025

Mikhail Sinitsyn/TASS

Russia's agriculture sector is losing about 150,000 workers every year, hampering efforts to boost food production, Agriculture Minister Oksana Lut [said](#) Wednesday.

"There is a personnel shortage [in the agriculture sector]. We need 160,000 new workers per year to renew the industry, because 150,000 people are leaving every year," Lut said at the Golden Autumn 2025 international exhibition in Moscow, according to Interfax.

President Vladimir Putin has ordered the sector to increase agricultural output by 25% and exports by 50% by 2030 compared with 2021 levels, she added.

The labor shortage has become a key obstacle for Russia's agro-industrial complex, which is already grappling with poor harvests caused by extreme weather and a shortage of high-quality imported seeds.

Lut said digitalization could help ease the shortfall by automating routine manual labor and shifting workers toward “more intellectual tasks.”

According to ministry data, about 6.4 million people are currently employed in the sector.

This summer, Deputy Economic Development Minister Maxim Kolesnikov [said](#) the labor deficit in agriculture was nearing 200,000 people, adding that the sector employs about 5% of the national workforce.

A report from parliamentary hearings earlier in 2025 found that farms across Russia were operating with 30% to 50% fewer workers than needed, with an acute shortage of skilled specialists familiar with modern technologies.

Employment in the sector fell from 4.46 million in 2017 to 4.2 million in 2023, according to the report.

Former Agriculture Minister Alexander Tkachev [warned](#) in late 2024 that the ongoing exodus of workers could push Russia’s farm sector toward “catastrophe.”

In April 2025, annexed Crimea’s agriculture chief Denis Kratyuk [suggested](#) stripping university diplomas from graduates who refuse to work in their trained field to help fill vacancies in the industry.

Labor shortages have compounded the effects of severe weather this year.

Major farming regions including Rostov, Voronezh and Krasnodar have declared states of emergency due to frosts and droughts, which have led to the [lowest sunflower harvest](#) in 13 years and a [sharp drop](#) in sugar beet yields.

Experts partly blamed the decline on a ban on European seed imports, which previously produced higher crop yields.
