

# Ukrainian Drone Strikes Slash Russia's Fuel Exports to Lowest Level Since Early 2022 – Bloomberg

October 15, 2025

Yury Smityuk / TASS

Ongoing Ukrainian drone attacks on Russia's energy infrastructure have reduced the country's fuel exports to their lowest levels since the invasion of Ukraine, Bloomberg [reported](#) Wednesday.

Average daily exports fell to 1.88 million barrels in the first 10 days of October, the lowest level since at least early 2022, according to data from analytics firm Vortexa compiled by Bloomberg.

Russia's total refining output remains below 5 million barrels per day, also the lowest since spring 2022, following strikes that have hit more than 20 major refineries.

Seasonal maintenance work has added further downward pressure.

The government has banned gasoline exports in an effort to ease domestic shortages caused

by the slump in refining output.

A September strike also damaged the Ust-Luga terminal, which handles about 60% of Russia's naphtha exports, a key feedstock for petrochemical production. As a result, naphtha shipments plunged 43% month-on-month to just 198,000 barrels per day in October, the lowest since January 2022.

Exports of diesel and gasoil rose 13% from September while fuel oil exports declined by 8%, Bloomberg said.

The International Energy Agency (IEA) warned this week that Russian oil companies will continue to feel the effects of the Ukrainian attacks for nearly a year, noting that one in three refineries has been hit since August.

Refining output is unlikely to return to its normal levels before June 2026, the IEA said in a report published Tuesday.

That forecast does not account for potential future damage if Ukrainian drone strikes continue. For now, refining throughput is estimated to have dropped by about 10% since the attacks began.

Naphtha exports face another potential setback from Taiwan, one of Russia's largest buyers alongside India.

Taiwan increased its imports of Russian naphtha sixfold in the first half of this year compared with 2022, purchasing 1.9 million tons worth \$1.3 billion, according to estimates from the Center for Research on Energy and Clean Air.

However, Taiwan's economy minister recently [said](#) that local companies would halt purchases of Russian naphtha if requested by the European Union.
