

Latvia Completes 280-Kilometer Fence Along Russian Border

December 30, 2025

vni.lv

Latvia has completed construction of a 280-kilometer (174-mile) fence along its border with Russia, the Delfi news website [reported](#) Tuesday, citing the state real estate company that oversaw the project.

The 17.9-million-euro (\$19.6 million) project comes as part of a broader effort in the Baltic states to strengthen border security amid heightened tensions with Russia.

Valsts nekustamie īpašumi (VNI) said work is continuing on related border infrastructure, including patrol roads, pedestrian bridges across marshland, watchtowers and other engineering structures.

Most of the remaining infrastructure work is due to be completed by the end of 2026.

Interior Minister Rihards Kozlovskis said Latvia is now installing high-tech surveillance and monitoring equipment along the border to create what he described as a “modern border

protection system” on the European Union’s eastern frontier.

Finance Minister Arvils Ašeradens said the completion of the fence and supporting infrastructure would strengthen the operational capabilities of Latvia’s border guard service.

Latvia has already built a 145-kilometer fence along its border with Belarus.

Lithuania and Estonia are also constructing barriers along their borders with Russia, citing security concerns linked to Moscow’s increased military posturing and what the region’s governments describe as the weaponization of migration.

Finland is building its own fence on the Russian border, allocating \$143 million for the project and planning to secure up to 260 kilometers (162 miles) of its southeastern frontier.

Helsinki has also announced plans to construct additional fortifications, including bunkers and shelters designed to withstand direct artillery or missile strikes.

Poland has completed an electronic barrier along its border with Russia’s Kaliningrad exclave.

The \$84-million system runs along 199 kilometers (124 miles) of the land border, excluding the Baltic Spit, where the frontier has long been monitored using electronic surveillance.

Warsaw has said the fence is needed in part to counter the risk of migration pressure, citing the start of flights to Kaliningrad from the Middle East and Africa.
