Russian oil companies suffered more than 1 trillion rubles (\$12.9 billion) in losses as a result of Ukraine's campaign of strikes on Russian oil refineries in 2025, a senior executive at insurance broker Mains [told](#) the *Kommersant* business daily.

Direct damage to the oil and gas sector from drone attacks has already exceeded 100 billion rubles (\$1.29 billion), while lost profits and indirect losses have pushed the total above 1 trillion rubles (\$12.9 billion), said Yevgeny Borovikov, Mains' deputy CEO.

According to Bloomberg [calculations](#) based on statements by Ukrainian and Russian officials, Ukraine carried out 120 attacks on Russian energy facilities in 2025.

Oil refineries accounted for 81 of these attacks.

Maritime infrastructure, including [offshore oil and gas fields](#), was targeted 27 times, while pipelines and tankers were struck eight and four times respectively.

August saw the highest number of refinery strikes with 14 incidents, while December recorded the largest number of attacks overall at 24.

Amid the attacks, pipeline supplies of crude oil to Russian refineries [fell](#) to their lowest level in 15 years in 2025, according to calculations by consultancy Argus.

Refineries received 228.34 million tons of crude, a 1.6% decrease year-on-year.

Total oil refining in Russia declined by 1.7% to 262.3 million tons, an industry source told *Kommersant*.

Insurers said losses from coverage of “terrorism” and sabotage risks exceeded 100% in 2025, rising severalfold due to a sharp increase in claims.

Market figures said this had led to significantly higher premiums and deductibles.

Alexei Khutoryansky, head of corporate underwriting at insurer Soglasie, told *Kommersant* that losses in the company’s portfolio had jumped more than tenfold.

“Market-wide dynamics are likely close to ours. Premiums for these risks are currently lower than payouts,” he said.

Another major insurer told *Kommersant* its losses had increased by at least 200%.

Insurance broker Remind said the number of insured events and the damage caused by them rose “many times over” in 2025, estimating the average loss from a single refinery attack at several hundred million rubles (several million dollars).

SOGAZ also reported a sharp rise in claims linked to “terrorism” risks.

Dmitry Gavrilov, head of property underwriting at Yugoria, said the increase reflected both the growing number of attacks on industrial and infrastructure facilities and changes in attack tactics, including the use of multiple drones and weapons systems in a single strike.

Defense Minister Andrei Belousov [said](#) in December that Russia’s air defense systems were operating at an average efficiency rate of 97%.

He said Ukraine had increased the average number of drones launched at Russia to about 3,700 per month in 2025.

Ukraine’s security service chief Vasyl Maliuk has said Ukrainian forces carried out around 160 successful strikes on oil production and refining facilities in Russia last year.

He said the highest number of targets was hit in September and October, including six refineries, two oil terminals, three storage depots and nine pumping stations.
