A growing number of countries in East Asia are moving or considering moves to buy Russian oil as governments scramble to boost supplies and ease soaring prices caused by the war in the Middle East.

On Thursday, the U.S. Treasury Department authorized the delivery and sale of Russian crude oil and petroleum products loaded onto ships between March 12 and April 11. Some European leaders have criticized the decision, arguing that it will help the Kremlin fund its invasion of Ukraine.

Thailand's Deputy Prime Minister Phiphat Ratchakitprakarn [said](#) Friday that his country is preparing to open talks on purchasing Russian crude to offset shortages. Thailand, which has just over three months of crude reserves, suspended fuel exports last week to conserve domestic supplies.

Authorities in the Philippines have said they are “considering” importing Russian oil but

would defer any decision to the energy department, local media reported. That comes after government workers in the Philippines [shifted](#) to a four-day workweek in response to the recent surge in fuel costs.

Many countries in East Asia rely heavily on oil and gas supplies from the Middle East, most of which flow through the Strait of Hormuz. Shipments through the narrow waterway have come to a virtual standstill since the outbreak of hostilities, and Iran's new supreme leader, Mojtaba Khamenei, has vowed to keep the strait closed as a "tool to pressure" the United States and Israel.

Japan, which imported 94% of its crude from the Middle East in 2025, [said](#) it would "consider" whether to buy Russian crude after the United States issued its sanctions waiver. However, unlike some Asian countries, Japan maintains large strategic reserves equivalent to 254 days of consumption.

On Friday, Foreign and economic ministers from ASEAN, a regional association of countries, [called for](#) an immediate end to the war in the Middle East, saying the effects of surging oil prices and disrupted trade are already hitting Southeast Asia's economies.

Meanwhile, Sri Lanka's Foreign Minister Vijitha Herath met with Russian Ambassador Levon Dzhagaryan to [discuss](#) "expediting" oil imports after the United States issued the sanctions waiver. Dzhagaryan said he would relay the request to Moscow and help facilitate the deliveries, local media reported.

Russia has earned an estimated \$1.3-1.9 billion windfall from taxes on oil exports since the effective closure of the Strait of Hormuz sent global energy prices soaring, The Financial Times [reported](#) on Friday. A study cited by the newspaper said European governments may come under pressure to delay an upcoming ban on Russian liquefied natural gas if the global energy supply crunch persists.

Asian countries were importing Russian oil even before the United States and Israel began their attacks on Iran in late February. China and India are major buyers of crude from Russia, though the latter had come under pressure to end its purchases from the Trump administration over accusations that it was helping prop up Moscow's war economy.

Last week, the U.S. Treasury Department granted Indian refiners a 30-day waiver to buy Russian oil currently stranded at sea.
