Authorities in northwestern Russia's Leningrad region announced Friday a recruitment campaign for military reservists to bolster air defenses following a recent uptick in Ukrainian drone strikes on critical oil and export infrastructure.

Governor Alexander Drozdenko [said](#) new "mobile fire groups" will be stationed at key facilities to counter aerial threats. He urged veterans of the war in Ukraine, as well as former Soviet and Russian soldiers, to sign three-year contracts to man the units.

The region [plans](#) to add 54 of those air defense groups to its existing 80 units by June 1.

Drozdenko's announcement follows repeated strikes on major oil export hubs in the Leningrad region since mid-March. The attacks were at one point estimated to have contributed to an overall 40% reduction in Russia's oil export capacity, a key source of

government revenue.

Since the start of the year, air defense systems have intercepted 243 drones in the Leningrad region, Drozdenko [said](#) this week.

“We have the longest border with the countries of the unfriendly NATO bloc,” the governor said, referring to Estonia and Finland. “Our region has become not only a border area, but also a frontline area.”

Senior federal officials, including Russian Security Council Secretary Sergei Shoigu and presidential aide Nikolai Patrushev, this week accused Finland and the Baltic states of allowing Ukraine to use their airspace for drone attacks against Russia.

Those countries have denied Russia’s accusation.
