

Novosibirsk Veterinary Official Involved in Mass Cattle Cull Found Dead

April 29, 2026

Sergei Tur. nso.ru

A senior veterinary official in the Novosibirsk region was found dead under unclear circumstances, the Interfax news agency [reported](#) Wednesday, coming weeks after government-enforced mass cattle culls triggered rare protests by farmers.

Sergei Tur, who headed the regional veterinary agency's department for animal disease control, was reportedly responsible for organizing the quarantines and culling of livestock on farms affected by a recent cattle disease outbreak, which led to an [estimated](#) \$3 million in losses.

While Russian officials [attributed](#) the cull to rabies and an "unusual mutated form" of pasteurellosis, the scale of the cull raised suspicion. Farmers have questioned why entire herds were destroyed rather than quarantined, as pasteurellosis is typically treatable with antibiotics.

Regional health officials confirmed Tur's death at age 43 in comments to Interfax. They

directed all other questions to law enforcement.

Police told Interfax that an investigation into Tur's death is underway.

Two news outlets in Novosibirsk, citing anonymous sources, [reported](#) that Tur was found in his car with gunshot wounds, prompting investigators to suspect suicide as the cause of death.

Yet a third outlet, citing his wife, Yelena, reported that he had died as a result of heart failure on Tuesday after taking sick leave from work.

“He passed away yesterday, his heart gave out,” she was quoted as saying. “It’s directly related to his work, which was a huge mental and physical strain.”

Last week, Novosibirsk region Governor Andrei Travnikov [fired](#) the regional agriculture minister over “low veterinary safety” and the rare entry of “dangerous animal diseases” into the Siberian region.

The U.S. Department of Agriculture’s foreign service [suggested](#) the recent culls in Russia may actually be a response to an unconfirmed outbreak of foot-and-mouth disease, a highly contagious and often fatal virus. That theory gained traction after Kazakhstan banned imports of Russian meat and livestock.
